Thanks! I will see if I can get that link. Also just saw a 2.3 somewhere around Tulsa.

Thanks Angela. If you find the link for Austin I'd be interested. FYI, Here is a link to a statement released yesterday by the RRC seismologist on the Irving situation. The response comments from the public below this article are interesting. <http://www.dallasnews.com/opinion/latest-columns/20150114-craig-pearson-not-so-quick-on-quakes.ece>

Here is a screen shot I just took after the 3.5 in Caldwell KS. Looks like this is lining up in a new fault but that is my guess. FYI. Austin Holland interview over the phone in Guthrie last night was horrible. Logan County shakes more than most and he is like we just don't know why now? Let's study it some more and maybe we will learn something new. We are frustrated here in OK!

I can't seem to get the link to his interview to post but it would only upset you so carry on!!!
Have a nice day, Angela
